Personal Upgrade Kit
This kit is for people who want to upgrade a single Macintosh computer to system software version 7.1. To upgrade a group of Macintosh computers, you should purchase the System 7 MultiPack.

Contents:
- Macintosh system software version 7.1
- Before You Install application
- QuickTime installer
- Reference manuals for version 7.1

Required equipment:
- A Macintosh computer with at least 2 megabytes of RAM (4 megabytes recommended for running multiple applications). NOTE: If your Macintosh is already running system software version 7.1, you do not need this upgrade kit.
- A hard disk drive
- An iomega ZIP high-capacity disk drive

The ideal combination of power and ease of use.

The Macintosh of the future is the Macintosh on your desk.

System 7 for Macintosh

Presenting Apple's award-winning system software: powerful new capabilities, versatile new features—and still incredibly easy to use. System 7 lets you take advantage of new applications from leading developers, such as Claris, Adobe, Microsoft, Aldus, and Lotus. So join the millions of Macintosh users worldwide who have discovered the power of System 7.
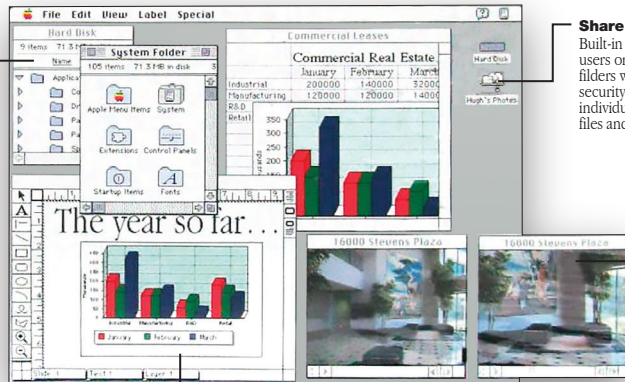

Run multiple applications.
Multitasking lets you keep several applications open and running at the same time. You can switch from one application to another with a click of the mouse.

Work smarter and easier.
The new Finder and improved desktop give you powerful, flexible options for organizing, virwing, and working with your documents, folders, and applications. It's also easier to add fonts, system extensions (INITs), and control panels—simply drag their icons into the System Folder and they automatically go into the correct folder.

Share information easily.
Built-in file sharing makes it easy for users on a network to share files and filders with one another. You can set security features so that only specific individuals and groups can access your files and work with them.

Get your ideas moving.
With QuickTime software, you can work with dynamic information such as video and sound as easily as you work with text and graphics. You can copy and paste QuickTime "movies"— video segments, animation sequences, and sounds—into your documents and presentations.

Update information.
The publish and subscribe feature lets you create linksbetween documents. You can "publish" any part of a document, such as text or a graphic. Then you or people you work with can "subscribe" to the information from other documents. Changes made to the original information appear automatically in the other documents.
